HIGHLY FOCUSABLE BEAM

The BLUECOLT® BlackChameleon™ L.E.D. flashlight's innovative focusing lens provides amazing near and long distance performance. The extraordinarily consistent wide beam that it produces has been highly praised for use in forensic investigations. Our multi-step precision machining process ensures a lustrous finish and silky smooth threaded components. Our in-house anodizing workshop allows end-to-end control of the manufacturing process. The high output L.E.D. in this product is made by CREE, one of the largest manufacturers of L.E.D.s in the U.S.A. Our superior circuits combined with a high output L.E.D. will provide long lasting performance. The silicone switch cover glows in the dark to help you easily locate the flashlight, and will withstand the rigors of everyday use for a very long time.

BLUECOLT® flashlights have been tested in fire department burn simulations and have held up amazingly well. We carefully inspect each component for quality assurance in our stringent assembly process and test each finished flashlight prior to packaging. We even air-blow dust particles from our lenses prior to packaging. Our world-class manufacturing facility insures a high quality product with unsurpassed reliability.

LIGHT OUTPUT	RUNTIME	BEAM DISTANCE	WATER RESISTANT	IMPACT RESISTANT
 130 LUMENS	 2h	 240m	 WATER RESISTANT	 1m
